

Informed Consent Form

Tools to Improve Learners' Process when Performing Design Tasks

Purpose:

The purpose of this research is to design and build tools that improve learners' process when completing human-centered tasks.

Procedure:

If you agree, you will participate in the following tasks

1. Complete a set of design tasks using the tool we provide. Instructions on how to perform the tasks will be provided in the tool at the beginning.
2. Fill out a custom survey

Some participants might be invited to share their experience during the study through a short interview. The interview will be video-recorded.

Your participation is completely voluntary. You may choose not to answer a question or perform a task. You are free to withdraw consent and discontinue participation in the session at any time (including after the session) for any reason without penalty. You will receive points that are equivalent to points received for the assessment our study is supporting, even if you choose not to complete the study after starting.

Risk: This study includes minimal potential risks to participants, including loss of confidentiality, and frustration or fatigue.

Benefit: The potential benefits of scientific knowledge and improvement to tools that improve learners' process when performing design tasks. Such tools can automate the production of proof-of-work and document the evolution of learners' work. There are no direct benefits to the participant for participating.

Data privacy and Confidentiality: The interview session will take place in a private room or a private office. The recorded sessions will be stored as digital video files in Box accessible via institutional login. The files will be transcribed and stored for any subsequent analyses. A pseudonym will be attached to the data collected during the study. We will have a record that maps your name to the pseudonym, and this will be stored separately from your session data. The instructor staff will not have access to your study data. If a research team member is part of the instructor staff (instructor or teaching assistant), your data will be anonymized by another research team member before the instructor or teaching assistant research team member has access to it. You will not be identified by name in any publications resulting from this study either as a

participant or a co-author. Any publication from this research will provide summative demographic data across all participants. In cases where the tools use publicly available AI technology (like ChatGPT or Gemini), the research team will 1) use institutional versions where available (e.g., ChatGPT Edu for University of Utah); 2) strictly use AI for task-specific actions such as completing design tasks; and 3) not provide any information about participants to the AI tool.

Contact

If you have any questions or complaints or if you feel you have been harmed by this research, please contact Professor Vineet Pandey, Kahlert School of Computing, The University of Utah, at vineet.pandey@utah.edu or at 858 366 5701.

Please contact the Institutional Review Board (IRB) if you have questions regarding your rights as a research participant. Also, contact the IRB if you have questions, complaints, or concerns which you do not feel you can discuss with the investigator. The University of Utah IRB may be reached by phone at (801) 581-3655 or by e-mail at irb@hsc.utah.edu.

Research Participant Advocate: You may also contact the Research Participant Advocate (RPA) by phone at (801) 581-3803 or by email at participant.advocate@hsc.utah.edu

CONSENT

I confirm I have read the information in this consent form and have had the opportunity to ask questions. I will be given a signed copy of this consent form to keep.

- I voluntarily agree to participate in the study
- I voluntarily agree to a video recording of the interview for research purposes
